PASS	FAIL	UNCLEAR	TOTAL
6	2	2	10

Detailed Results

ID	Rule	Verdict	Evidence
R001	Drawings must be correct scale in all the sheets	PASS	Page 1 (M8398-00) is a cover/index sheet with no scale required. Page 2 (M8398-01) is a reference documents sheet with no scale required. Page 3 (M8398-G1) is a site specifications sheet that displays scale '1:2500' in the bottom right corner, which matches the preferred standard scales listed in the reference document (1:2500 is listed under Preferred scales). All sheets follow the rule: first sheets (cover, reference docs) have no scale, and the specification sheet includes proper scale notation.
R002	Check scale with viewport	UNCLEAR	The reference image shows a viewport properties dialog displaying 'Annotation scale: 1:100' and 'Standard scale: 1:100_1'. However, the FC drawing pages provided are PDF/printed documents without visible CAD viewport information or scale indicators. To properly verify this rule, access to the actual CAD file would be required to click on scales and view viewport properties. The drawing pages show standard scales (e.g., 'A3' format) but do not display the detailed viewport scale matching information visible in the reference CAD interface.
R003	FC stamp is correctly mentioned to all sheets?	FAIL	DRAFT watermark is not visible on any of the three FC drawing pages shown. All pages display 'FOR CONSTRUCTION' stamp instead, but the required DRAFT watermark is absent from all sheets.
R004	Layers correctly followed	UNCLEAR	The FC drawing pages provided are document cover sheets and site specification pages that do not contain detailed layer information or visual elements showing Existing vs Proposed components with distinct bold/unbold styling. The reference image shows a legend of layer names with color coding, but the actual drawing pages do not display the graphic content where layer usage (bold for proposed, unbold for existing) can be verified. To properly assess R004, visual inspection of actual layout drawings with component representations is required.
R005	Site number/Name/Address details correct	PASS	Site ID M8398, Site Name 'DOREEN TOWNSHIP-O', and Address '95 HAZEL GLEN DRIVE, DOREEN, VIC 3754' are all clearly visible and documented on the cover sheet (page 1) and site specifications sheet (page 3)
R006	Add structure owner site ID. (Indara, Amplitel & BAI etc)	PASS	Structure owner site IDs are present on the cover sheet: JOINT VENTURE SITE ID: JM6015 and INDARA SITE ID: 3501475
R007	Work authority number is correct	PASS	Work Authority Number N° 540266 is clearly displayed on both FC drawing pages (visible in the text 'OPTUS WORK AUTHORITY N° 540266' on pages M8398-00 and M8398-01). This is a 6-digit number matching the required format.

R008	Client logo is correct	PASS	Optus client logo (teal/turquoise) is present and correct on all three drawing pages (G1, G2, and G1 specification sheet). ServiceStream vendor logo is present on all pages. Both logos match the reference image and are consistently displayed across all sheets.
TEXT001	All text in uppercase font	FAIL	Found 344 lines with lowercase text. Examples: Page 1: 5G UPGRADE (eJV-OH) Page 2: 5G UPGRADE (eJV-OH) Page 3: Revision Details
TEXT002	Prior to fabrication/installation notes must be highlighted	PASS	No PRIOR TO INSTALLATION/FABRICATION notes found
